KNX Switch Actuator 4-channel, 4 SU MDRC, 16/20 A, 230 V AC, C-load, industry, 200 μ F

Product description:

The MDT Switch actuator AKI in industrial design for high to very high loads is used where high in-rush currents are expected. The actuator is equipped with bistable relays for currents up to 16/20 A and a C-load of up to 200 μ F. Thanks to manual mechanical operation they are particularly suitable for sensitive areas. The channels are also switchable without Bus power and the relay status is always visible.

Product functions:

- **Comprehensive application**
- **Mechanical manual activation for immediate operation of the relay contact**
- Visible Status
- Normally open and normally closed
- Time functions (switch-on / switch-off delay)
- Comprehensive staircase lighting and pulse functions
- **Extended logic and scene function per channel**
- Extended status functions (inverted, cyclic, during locking)
- **Threshold switch (1 Byte/2 Byte/2 Byte float)**
- **Operating hours meter**
- **Priority/forced operation with automatic release time**
- **4 mm² connection terminals. Individual L-connections**
- Power supply over the KNX Bus
- Fast application download (long frame support as of ETS 5)
- 3 year warranty

Hinweise

Protection against induced voltage spikes: To protect against voltage spikes when switching off inductive loads, it is recommended to use appropriate protective circuits such as flyback diodes, RC networks, or varistors directly at the actuator output.

*1 Mixed operation of nominal and safety extra low voltage (SELV) within the actuator is not permitted!
