

AMI-0416.03

KNX Switch Actuator 4-channel, 4 SU MDRC, 16/20 A, 230 V AC, C-load, industry, 200 μ F, current measurement

Product description:

The MDT Switch Actuator AMI with current measurement in industrial design measures reliably currents with up to 20 A per channel. Herewith for e.g., load surpass, and load shortfall can be monitored. High inrush currents and C-loads up to 200 μ F are not a problem for the AMI

Product functions:

- Comprehensive function extension
- Integrated True RMS current measurement
- Current measurement range 10 mA ... 20 A
- Integrated meter function for energy consumption (Wh/kWh)
- Fast reaction < 1 s in Master/Slave operation
- Push-button for manual operation and LED Indicator per channel
- Time functions (switch on-/switch off delay, staircase light function)
- Threshold switch function and consumption threshold value
- Logical functions, 8 scenes per channel
- Operating hours meter
- Extended status functions (inverted, cyclic, during locking)
- Priority/forced operation with automatic release time
- Behaviour on Bus power failure/reset selectable
- 4 mm² connection terminals. Individual L-connections
- 3 year warranty

Hinweise

Protection against induced voltage spikes: To protect against voltage spikes when switching off inductive loads, it is recommended to use appropriate protective circuits such as flyback diodes, RC networks, or varistors directly at the actuator output.

*1 Mixed operation of nominal and safety extra low voltage (SELV) within the actuator is not permitted!
